

Week 6 Report: Difficulty Levels & Hint System

Objective

The objective of Week 6 was to enhance the Word Scramble Game by implementing different difficulty levels and a hint system. This included creating Easy, Medium, and Hard levels, selecting words based on the chosen difficulty, and providing limited hints to assist players during the game.

Activities Completed

1. Difficulty Level Implementation

Three different difficulty levels were added to the game: Easy, Medium, and Hard. Each difficulty level contains a separate collection of words based on their complexity.

2. Word Selection Based on Difficulty

Separate String Arrays were created for Easy, Medium, and Hard levels. When a player selects a difficulty level, the program randomly chooses a word from the corresponding word list.

3. Hint System Development

A hint system was implemented to help players when they are unable to guess the correct word. The hint displays the first letter of the original word.

4. Hint Limitation

The number of available hints was limited based on the selected difficulty level. Easy level provides more hints, while Hard level provides fewer hints to make the game more challenging.

5. Testing

The difficulty selection and hint system were tested successfully. The program correctly selects words according to the chosen level, displays hints when requested, and limits hint usage properly.

Deliverables

- Difficulty Level Module
- Easy, Medium, and Hard Word Lists
- Random Word Selection
- Hint System
- Limited Hint Feature
- Updated Game Functionality

Expected Outcome

By the end of Week 6, the Word Scramble Game successfully supports multiple difficulty levels and a limited hint system. Players can choose their preferred difficulty level, receive appropriate words based on their selection, and use hints when needed. These features make the game more interactive, challenging, and enjoyable.
