

Week 8 Report: User Interface Improvement

Objective

The objective of Week 8 was to improve the user interface of the Word Scramble Game. This included designing a welcome screen, adding game instructions, improving the game layout, displaying the question number, score and timer clearly, and providing a final game summary to make the game more user-friendly and interactive.

Activities Completed

1. Welcome Screen Design

A welcome screen was added to the game interface. It displays the game title and provides options to start the game, view instructions, or exit the game.

2. Game Instructions

An instruction section was added to explain how to play the Word Scramble Game. The instructions describe the answering process, scoring system, and time limit.

3. Improved Game Interface

The main game interface was redesigned with organized sections for the scrambled word, answer field, buttons, score, timer, and question number. This makes the game easier to understand and use.

4. Score and Timer Display

The current score and remaining time are displayed clearly at the top of the game interface. The player receives 10 points for each correct answer, while the timer counts down during the game.

5. Question Counter

A question counter was added to show the player's current question number and the total number of questions. This helps the player understand their progress throughout the game.

6. Final Game Summary

A final game summary was added when the game ends. It displays the total number of questions, correct answers, wrong answers, final score, and high score. The player can also choose to play again or exit the game.

7. Testing

The improved user interface was tested successfully. The welcome screen, instructions, game controls, score display, timer, question counter, and final game summary worked correctly.

Deliverables

- Welcome Screen
- Game Instructions
- Improved Game Interface
- Score Display
- Timer Display
- Question Counter
- Final Game Summary
- Play Again and Exit Options
- Updated Game Functionality

Expected Outcome

By the end of Week 8, the Word Scramble Game successfully provides an improved and user-friendly graphical interface. Players can easily start the game, read the instructions, view their score and remaining time, track their progress, and see a complete summary after finishing the game. These improvements make the game cleaner, more interactive, and easier to use.
