

Week 7 Report: Timer & High Score System

Objective

The objective of Week 7 was to enhance the Word Scramble Game by implementing a timer and high score system. This included creating a countdown timer, ending the game when the time expires, managing player scores, storing the highest score, and displaying the final score at the end of the game.

Activities Completed

1. Countdown Timer Implementation

A countdown timer was added to the game with a fixed time limit of 30 seconds. The remaining time is displayed on the game interface and decreases every second.

2. Time Expiration Handling

The game was programmed to automatically end when the timer reaches zero. When the time expires, the player can no longer submit answers or continue playing.

3. Score Management

A score management system was implemented to track the player's performance. The player receives 10 points for each correct answer.

4. High Score System

A high score system was added to keep track of the highest score achieved by the player. The high score is updated whenever the current score becomes higher than the previous high score.

5. Score and High Score Display

The current score is displayed during the game. When the game ends, both the player's final score and the highest score are displayed.

6. Testing

The timer, score management, and high score system were tested successfully. The timer correctly counts down, the score increases for correct answers, and the game ends automatically when the time expires.

Deliverables

- Countdown Timer Module
- Time Expiration Handling
- Score Management System
- High Score System
- Score Display
- Final Score and High Score Display
- Updated Game Functionality

Expected Outcome

By the end of Week 7, the Word Scramble Game successfully supports a countdown timer and high score system. Players must solve the scrambled words within the given time limit, earn points for correct answers, and track their highest score. These features make the game more challenging, competitive, and interactive.
